Dear Hiring Team,

I ship production web applications that users and teams rely on. With 6+ years of full-stack experience, I focus on clear architecture, maintainable code, and owning delivery from design through deployment. I work in React, TypeScript, Node, and SQL and am at my best when I can take a project from idea to production.

In recent roles I delivered and supported client-facing SaaS in regulated, operationally critical environments: shipping features, improving systems, and resolving production issues alongside product, QA, and support. That same end-to-end approach shows up in my side projects: I'm a longtime fan of Jeopardy and trivia, so I built Trivia Master, a full-stack single-player game with three rounds, Daily Doubles, and wagering. I own the whole stack (React and TypeScript on the front end, NestJS on the back end), with all game logic and scoring enforced server-side and a clean, responsive UI focused on enjoyable gameplay.

I value curiosity, clear communication, and collaboration. I contribute through code reviews, technical guidance, and shared problem-solving, and I look for teams where that mindset is welcome.

I'd welcome the chance to discuss how I can add value to your team. Thank you for your time and consideration.

Sincerely,

James McCarthy
